# HT4 SCADA SOFTWARE PROGRAM

---

OVER THE LAST THREE DECADES, DFS SOFTWARE ENGINEERS HAVE LEVERAGED THE SUCCESSES AND LIMITATIONS OF OUR PREVIOUS SCADA PROGRAMS TO PRODUCE A STATE OF THE ART HUMAN MACHINE INTERFACE (HMI).

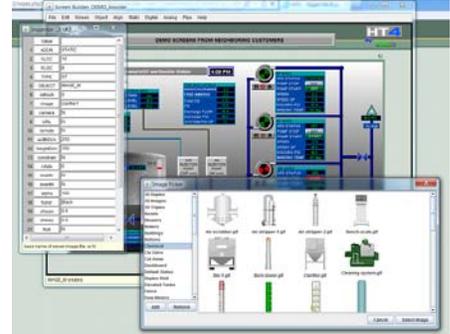

The HT4 SCADA Software program combines graphics and data with the power of an Internet Browser. HT4 was developed specifically for use in the water and wastewater industry and benefits from our decades of in-the-field experience. Its evolving features and integrated tools are driven by the needs of our utility customers.

HT4 includes unlimited licensing, which allows users to have unlimited clients, tags, and connections. This licensing model makes for a system that is fully scalable while being practical and affordable. In addition, All DFS SCADA Software upgrades are provided free of charge.

The HT4 SCADA Software program runs on a DFS-manufactured SCADA Server (the Hyper SCADA Server), which is a wall-mounted appliance with network connectivity to HMI clients and the Internet Browser. This self-contained design isolates the critical remote equipment polling, data collection, storage, and information serving functions from the operator interface (a true Client-Server Architecture).

The included HT4 Mobile application is somewhat of a streamlined version of HT4 that is optimized to run effectively on smartphones (utilizing any cell carrier) and Wi-Fi devices. HT4 Mobile users will find the essential tools needed for working in the plant, field and office. HT4 Mobile puts control in the palm of your hand, provides the ability to view and acknowledge alarms, as well as the ability to run data trends and reports on your collected data.

# HT4

**HT4**  
**MOBILE**  
The power of SCADA  
in your hand

## FEATURES AT A GLANCE

- Unlimited I/O Point-Count (Tags) License
- Unlimited Development & Run Time Licenses
- Unlimited Connections (local and remote)
- Connects to MS Windows-Based PC(s)
- Browser-Based HMI (doesn't require Internet)
- Includes HT4 Mobile (for smartphones & Wi-Fi)
- Debian Linux OS (transparent to user)
- Includes SQL Real-time Database & Historian
- Multiple Modbus Protocol Drivers
- Ladder Logic Program Builder
- Automated RTU I/O Screen Generator
- Custom Screen Builder Program & Images
- Includes Symbol Factory Software Toolbox
- Includes (14) Pre-Configured Data Reports
- Includes Trending Software
- Integrated 911 Alarm Callout Feature
- Supports "Symphony" Pump Management
- Lifetime SCADA Software Warranty
- Free SCADA Software Updates
- Requires Hyper SCADA Server (HSS)
